

Master Your Internal and External Reporting Requirements!

Efficient Corporate Reporting with SAP SEM-BCS

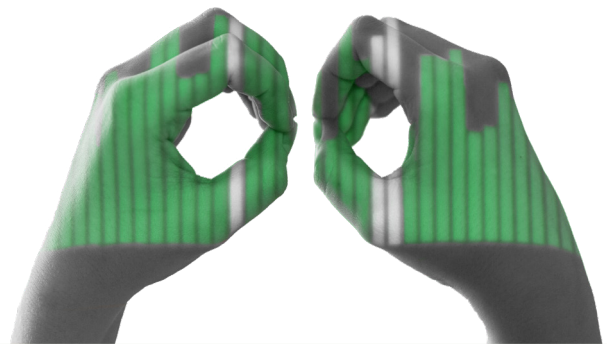

WE support you in preparing your regular Corporate Reporting (internal and external) in a timely manner – also in increasingly shorter reporting intervals.

For this purpose, we develop standardized functional processes together with you and support you with regard to the conceptual design of the required data models. Simultaneously, we define the entry and provision of the reporting data under integration of all linked and relevant data from primary systems. In addition, we integrate the relevant data of all required reporting events into your existing Data Warehouse – compliant with your BI Governance and with a high degree of automation.

Together with you, we also harmonize your internal and external Corporate Reporting and model the defined consolidation processes in SAP SEM-BCS. Thereby we ensure highly reliable as well as always up-to-date standards with regard to data quality and data harmonization.

For your planning requirements, we expand your reporting system by integrated solutions. Based on a standardized data model, you get a very flexible system which serves as an efficient and reliable fundament for your Corporate Reporting.

We would also like to support you in the generation of a standardized notation to give your internal and external Corporate Reporting a more meaningful as well as more self-explaining character. With regard to this, we orient ourselves at the International Business Communication Standards (IBCS®).
